

WMA evolve: key comparisons (39 of 64 completed runs)

Gemma-3-4B-PT | Opus-5 high / 1M | 10-hour session budget | Snapshot: 2026-09-04 05:52 UTC

Dots = individual trajectories; diamond = cohort mean; line = observed range. Cohorts are not causal contrasts.
Mean fits = completed SFT + RFT schedules; final-save failures count, explicit smokes do not. R1 counts are audited lower bounds.
* D: 3/4 completed. Red outline marks w09r03 (manual data-access finding); original validator/judge status is retained.
Shown: original R1 8+8, blocking baseline/control 4+4, and A/A+B/C/D (15). Historical extensions (25) are in the all-runs chart.
