

R1 B-v2 | every trajectory, aligned on completed supervised fits

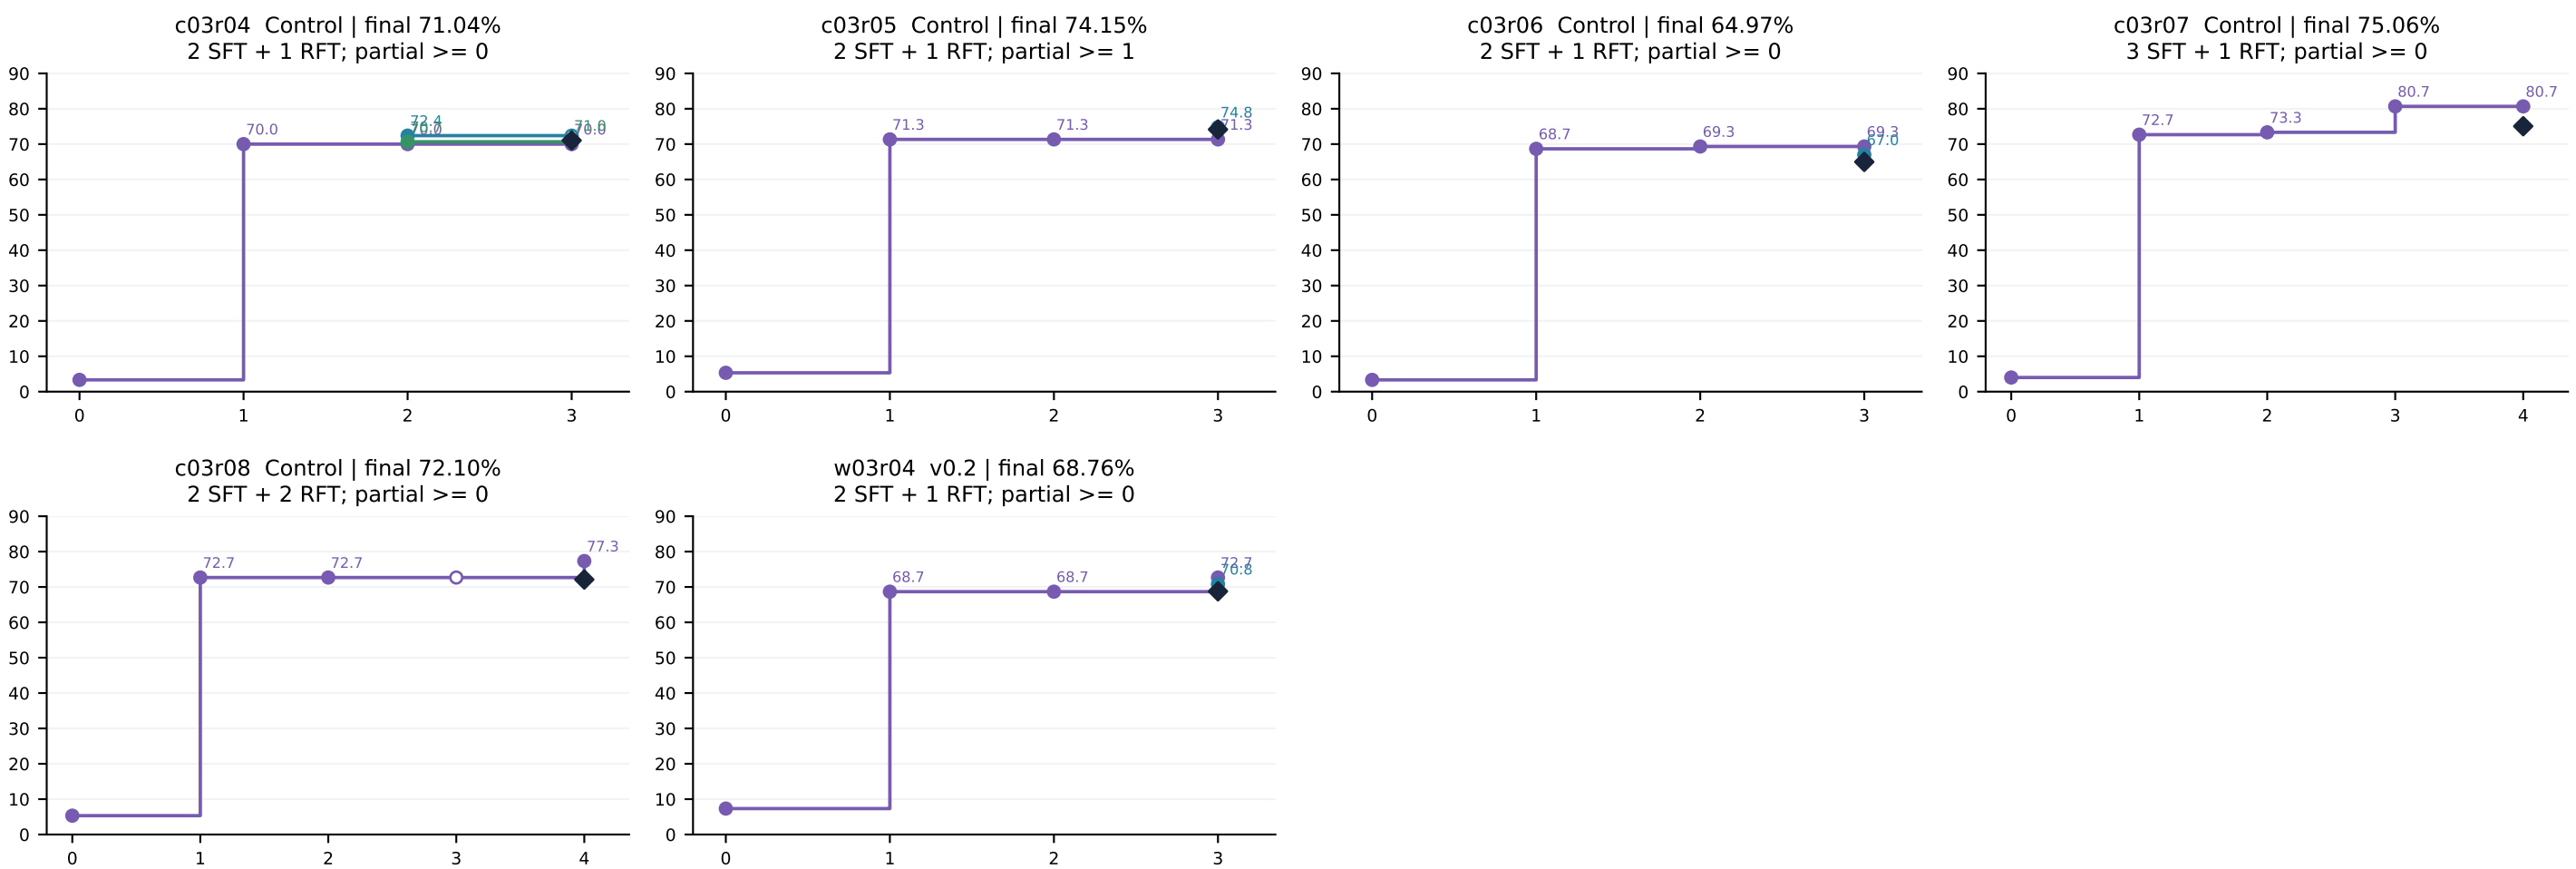

Purple=n150; blue=n500; green=n1319; black diamond=final official score. Hollow circle=old observation carried forward.
Each ruler is separate. No score is reassigned back to the training run that created its model. X counts SFT+RFT; smokes excluded.
Scores are observed maxima, not necessarily the selected incumbent. Other evaluation sizes are available in the CSV / interactive viewer.

R1 B-v3 | every trajectory, aligned on completed supervised fits

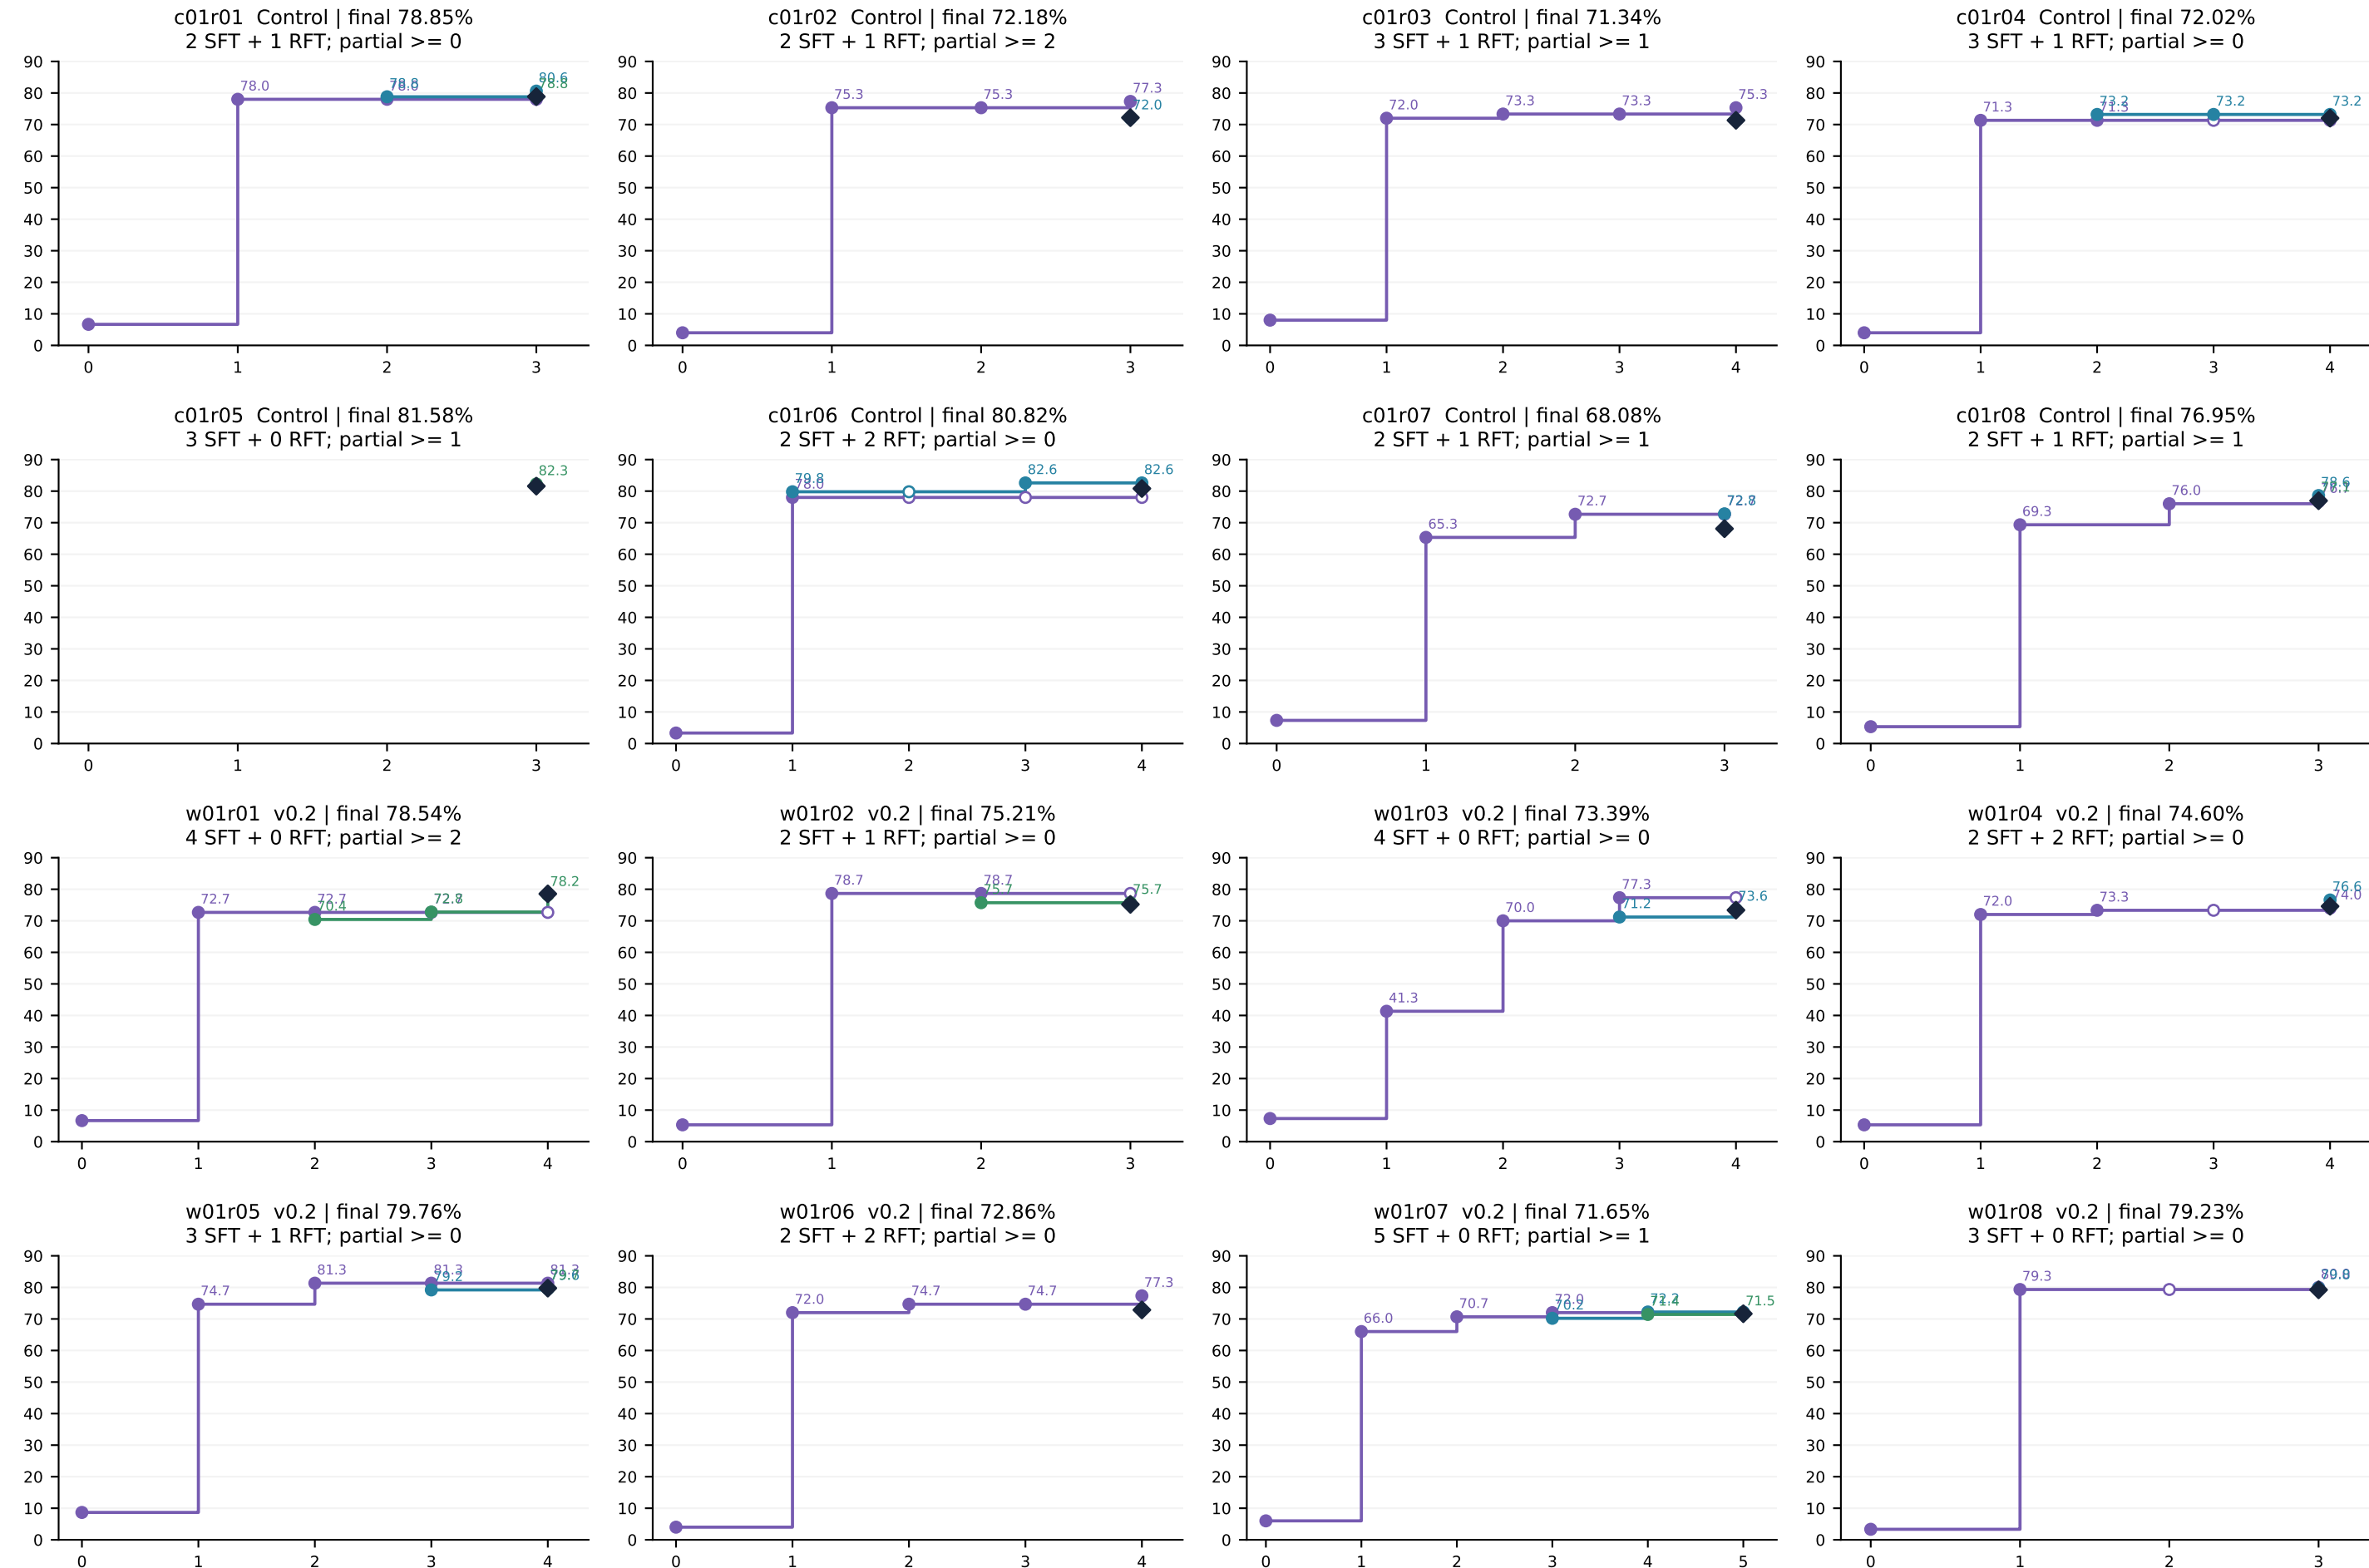

Purple=n150; blue=n500; green=n1319; black diamond=final official score. Hollow circle=old observation carried forward.
Each ruler is separate. No score is reassigned back to the training run that created its model. X counts SFT+RFT; smokes excluded.
Scores are observed maxima, not necessarily the selected incumbent. Other evaluation sizes are available in the CSV / interactive viewer.

R1 C-v2 | every trajectory, aligned on completed supervised fits

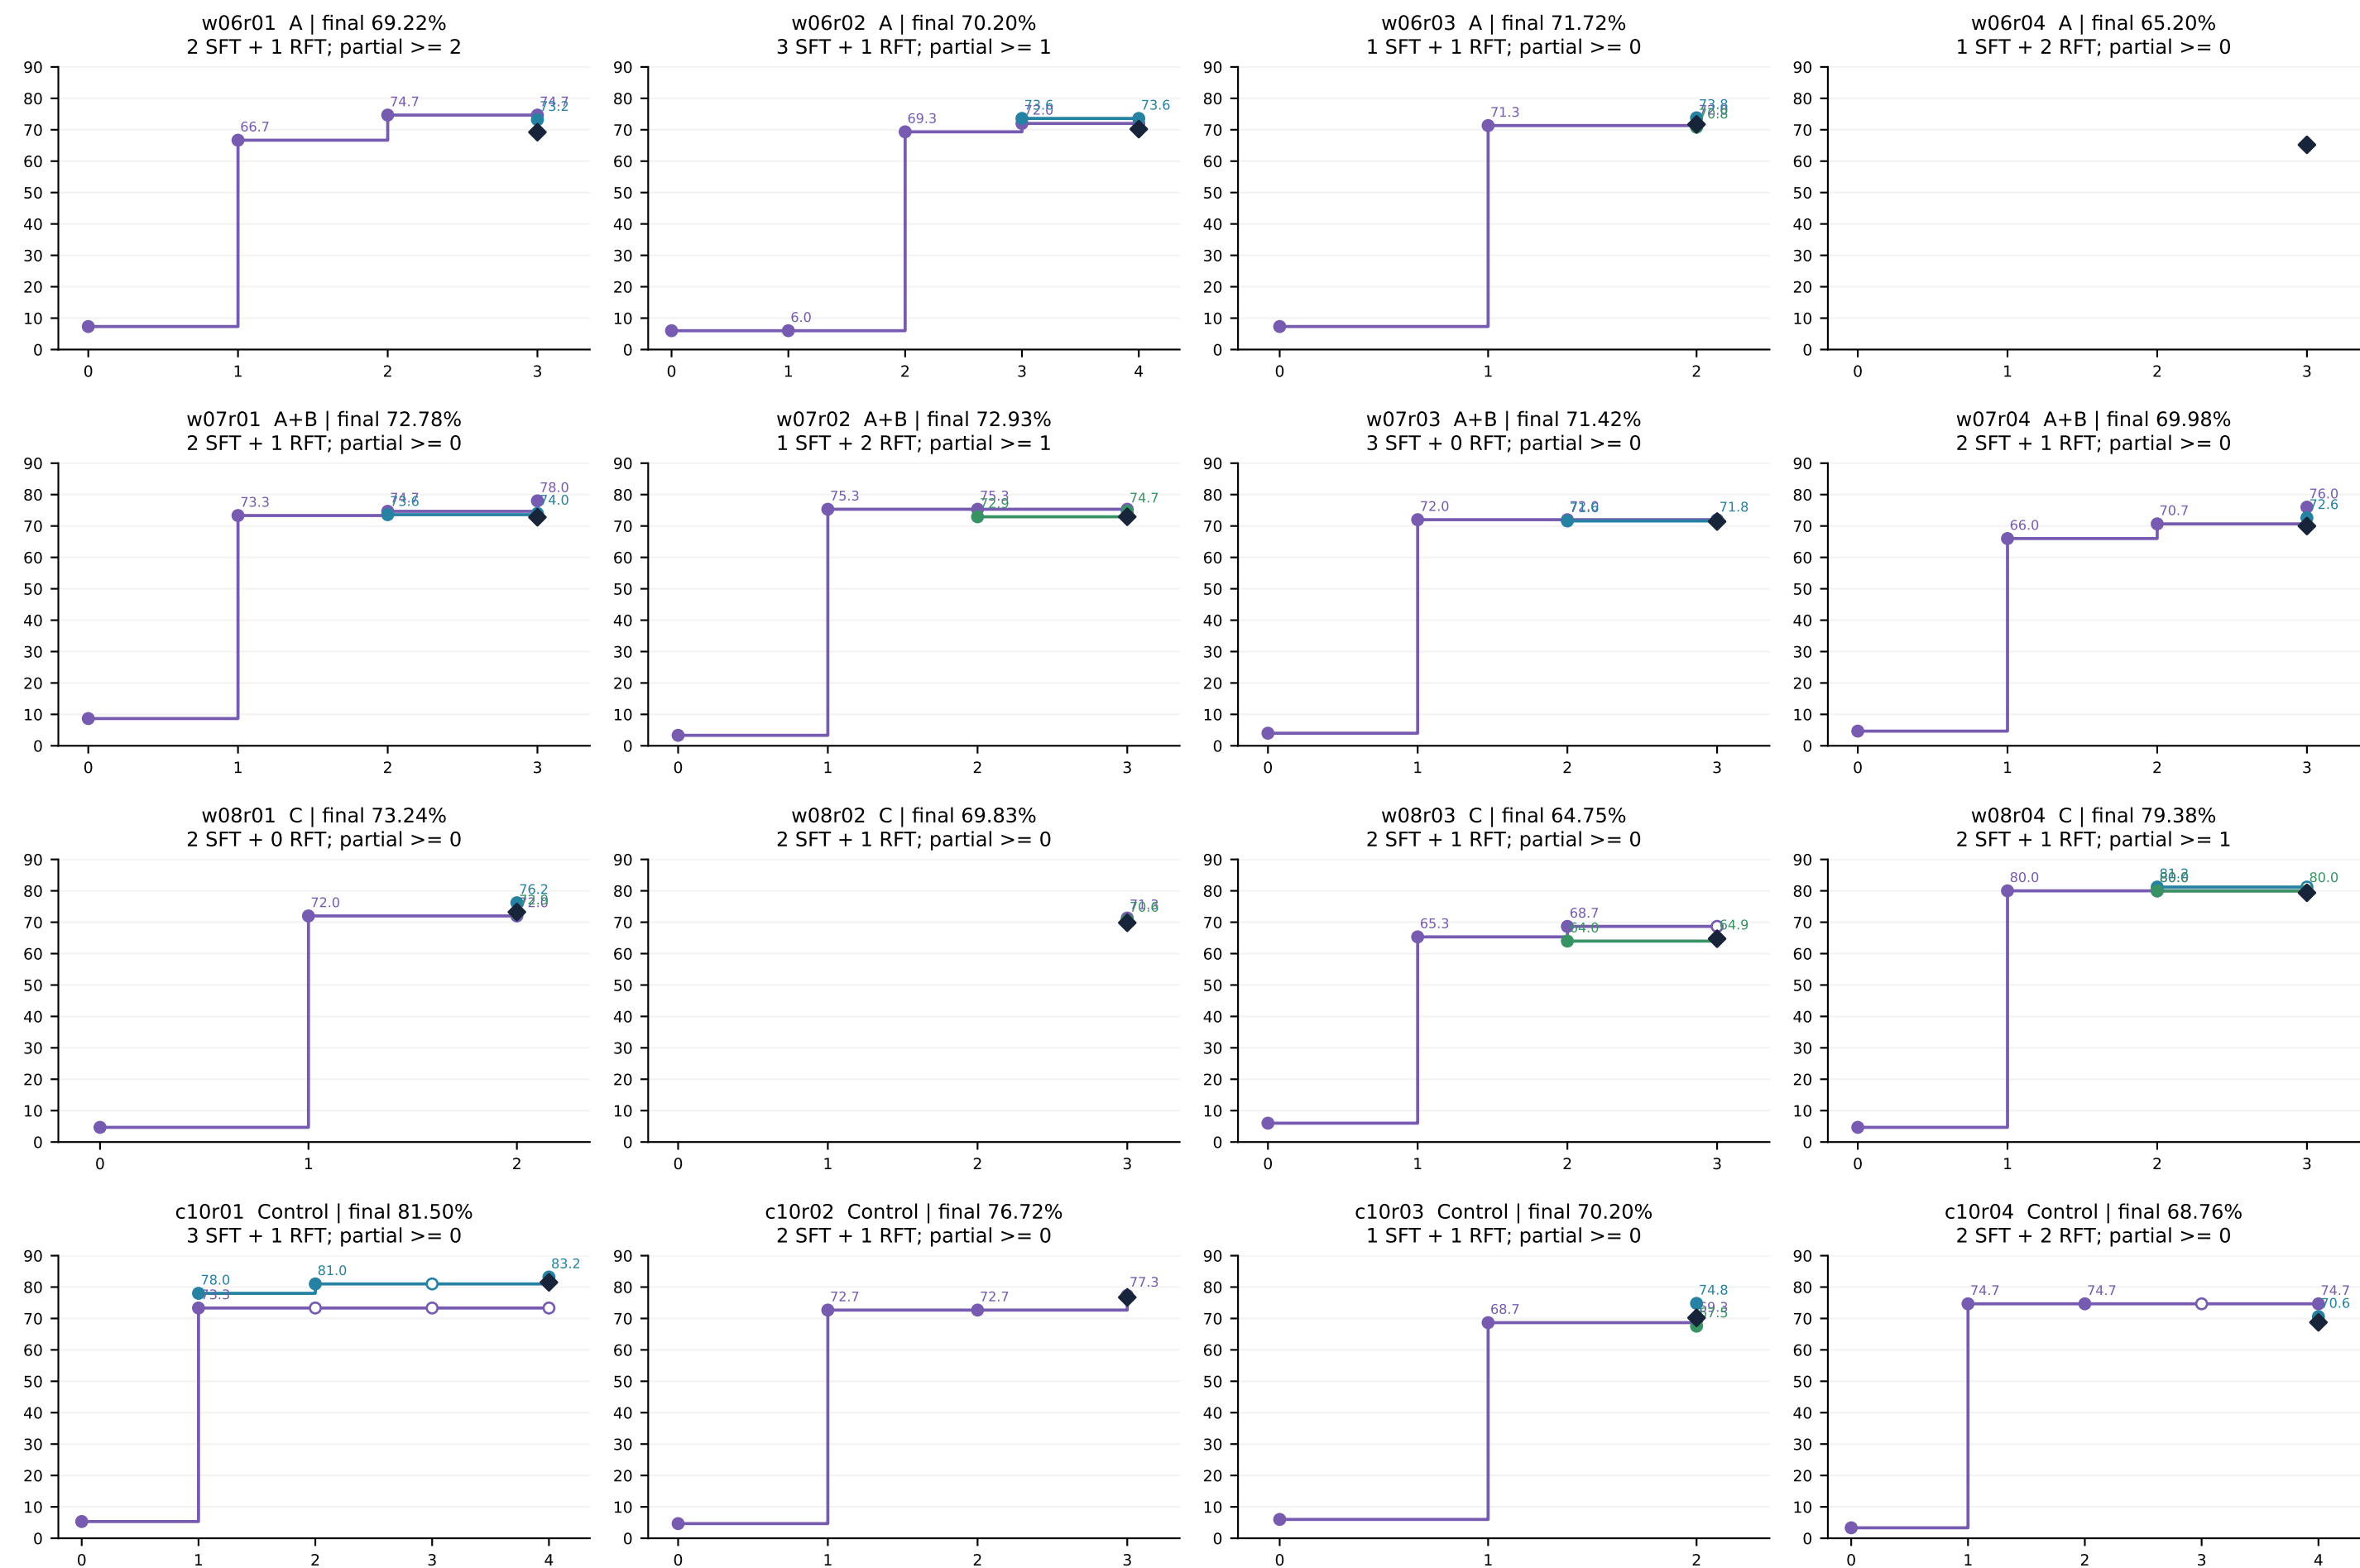

Purple=n150; blue=n500; green=n1319; black diamond=final official score. Hollow circle=old observation carried forward.
Each ruler is separate. No score is reassigned back to the training run that created its model. X counts SFT+RFT; smokes excluded.
Scores are observed maxima, not necessarily the selected incumbent. Other evaluation sizes are available in the CSV / interactive viewer.

R1 core | every trajectory, aligned on completed supervised fits

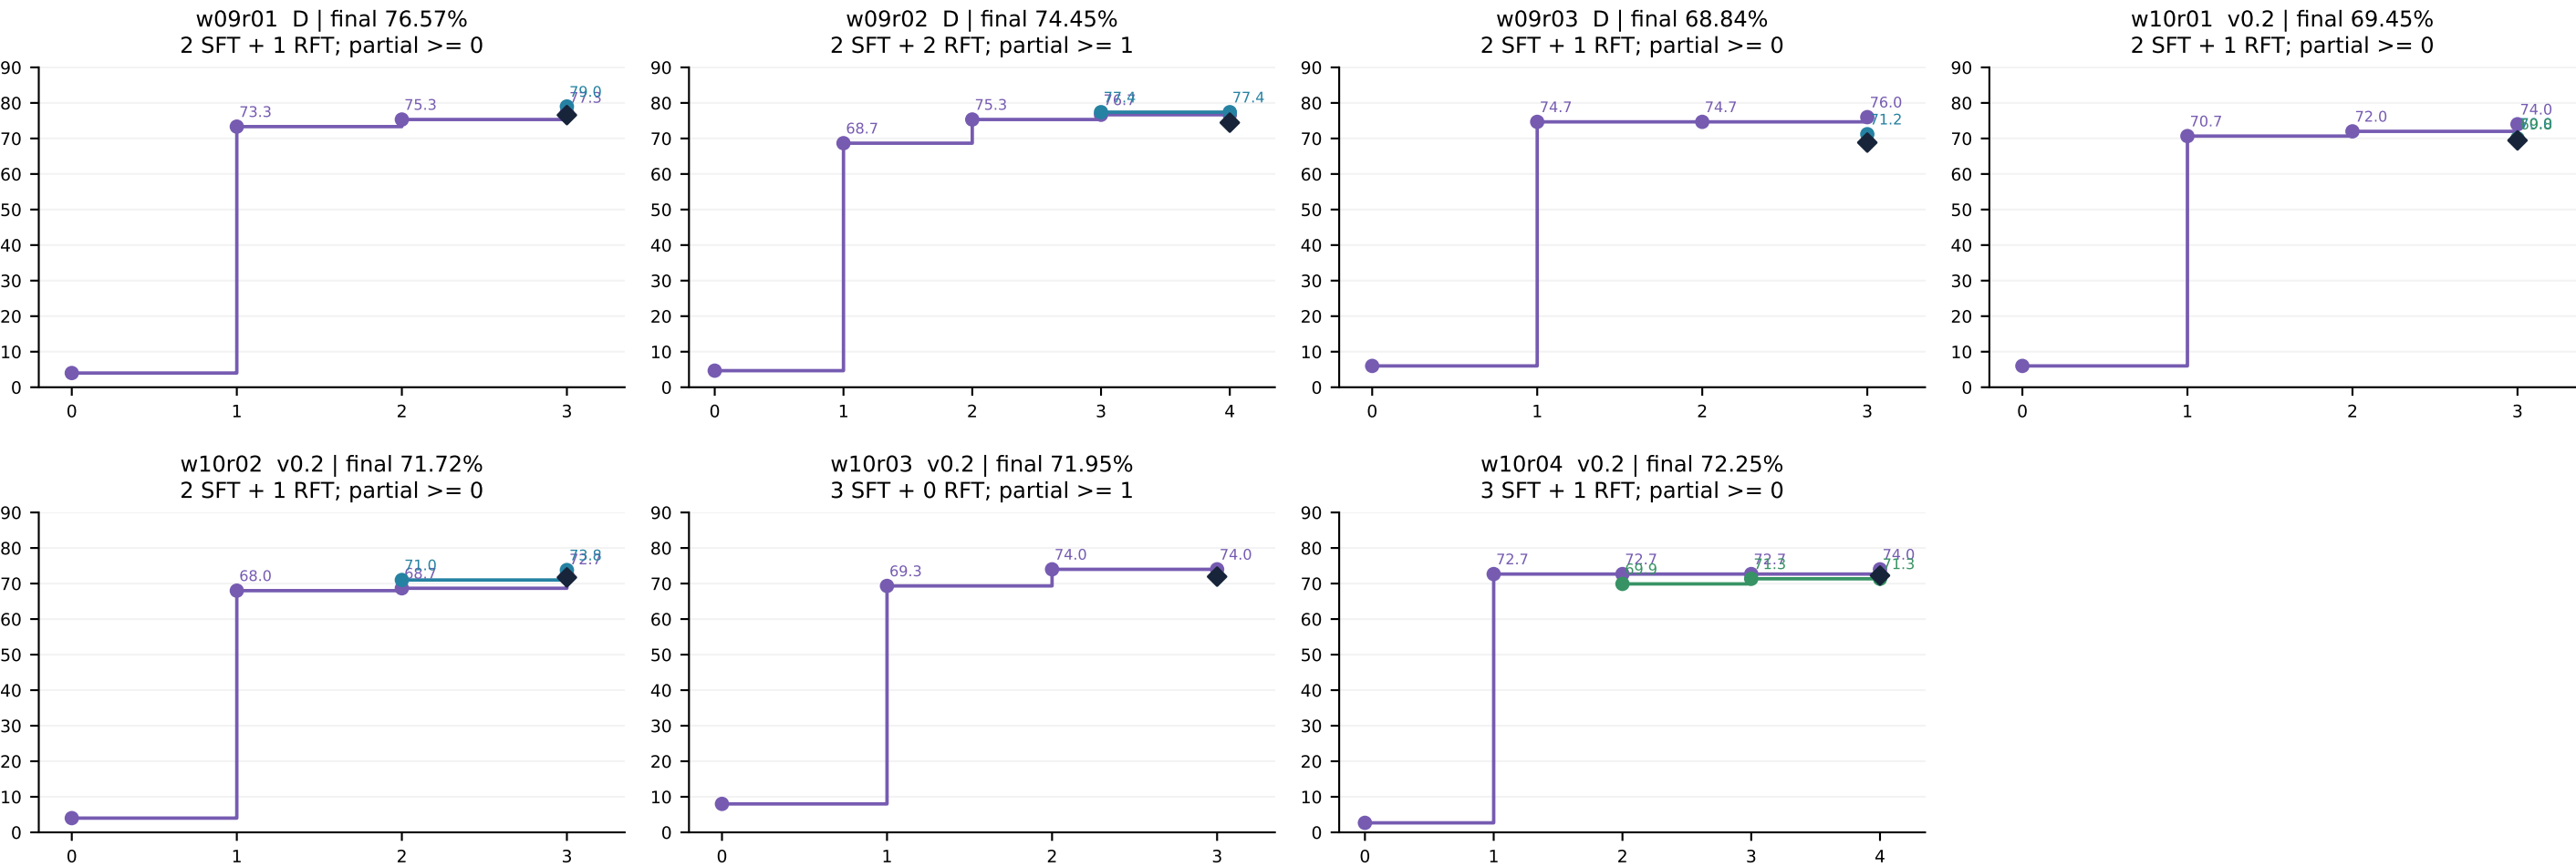

Purple=n150; blue=n500; green=n1319; black diamond=final official score. Hollow circle=old observation carried forward.
 Each ruler is separate. No score is reassigned back to the training run that created its model. X counts SFT+RFT; smokes excluded.
 Scores are observed maxima, not necessarily the selected incumbent. Other evaluation sizes are available in the CSV / interactive viewer.

R2 blocking | every trajectory, aligned on completed supervised fits

Purple=n150; blue=n500; green=n1319; black diamond=final official score. Hollow circle=old observation carried forward.
 Each ruler is separate. No score is reassigned back to the training run that created its model. X counts SFT+RFT; smokes excluded.
 Scores are observed maxima, not necessarily the selected incumbent. Other evaluation sizes are available in the CSV / interactive viewer.
